Word Games

FLEX(Focus, Learn, Execute, eXcel)
Daylin Jackson(GM)
Luke Hayden(Tester)
Zamiyah Hill(Scribe)
Dillon McCants(Programmer)

Overview

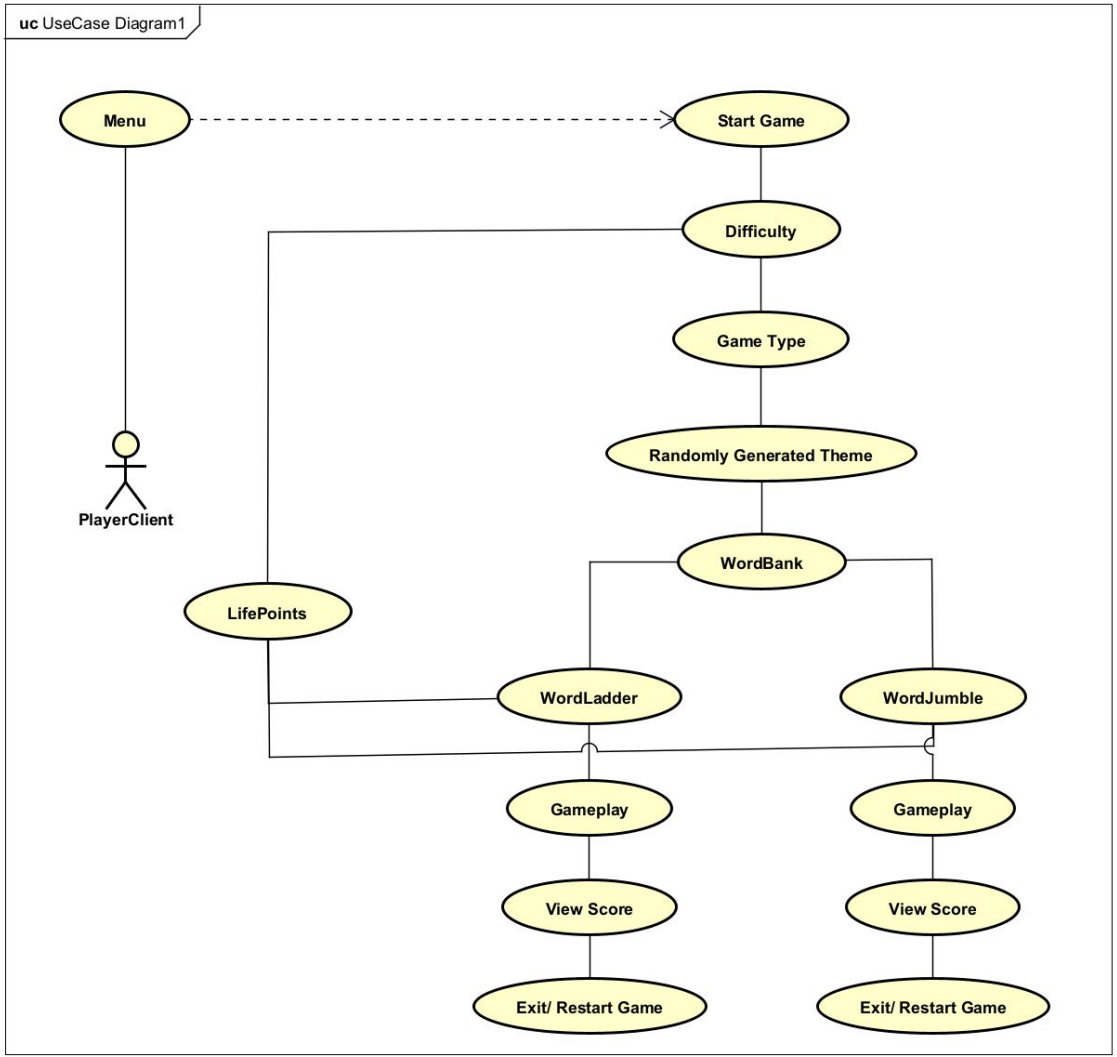

- Word Games (Jumble and Word Ladder), made in Visual Studio Code using Java.
- Glenn A. Santa Cruz
- These games will have varying levels of difficulty to cater towards a wide range of users to use for enjoyment and learning.
- In a business, this project could easily be used as a way to pass time, or it could even be used as a learning tool for children in elementary school. We believe this would help children learn much more efficiently due to the themes, music, and creative thought put into the project. The project should be able to keep the child's attention meaning they can learn new words!

Features

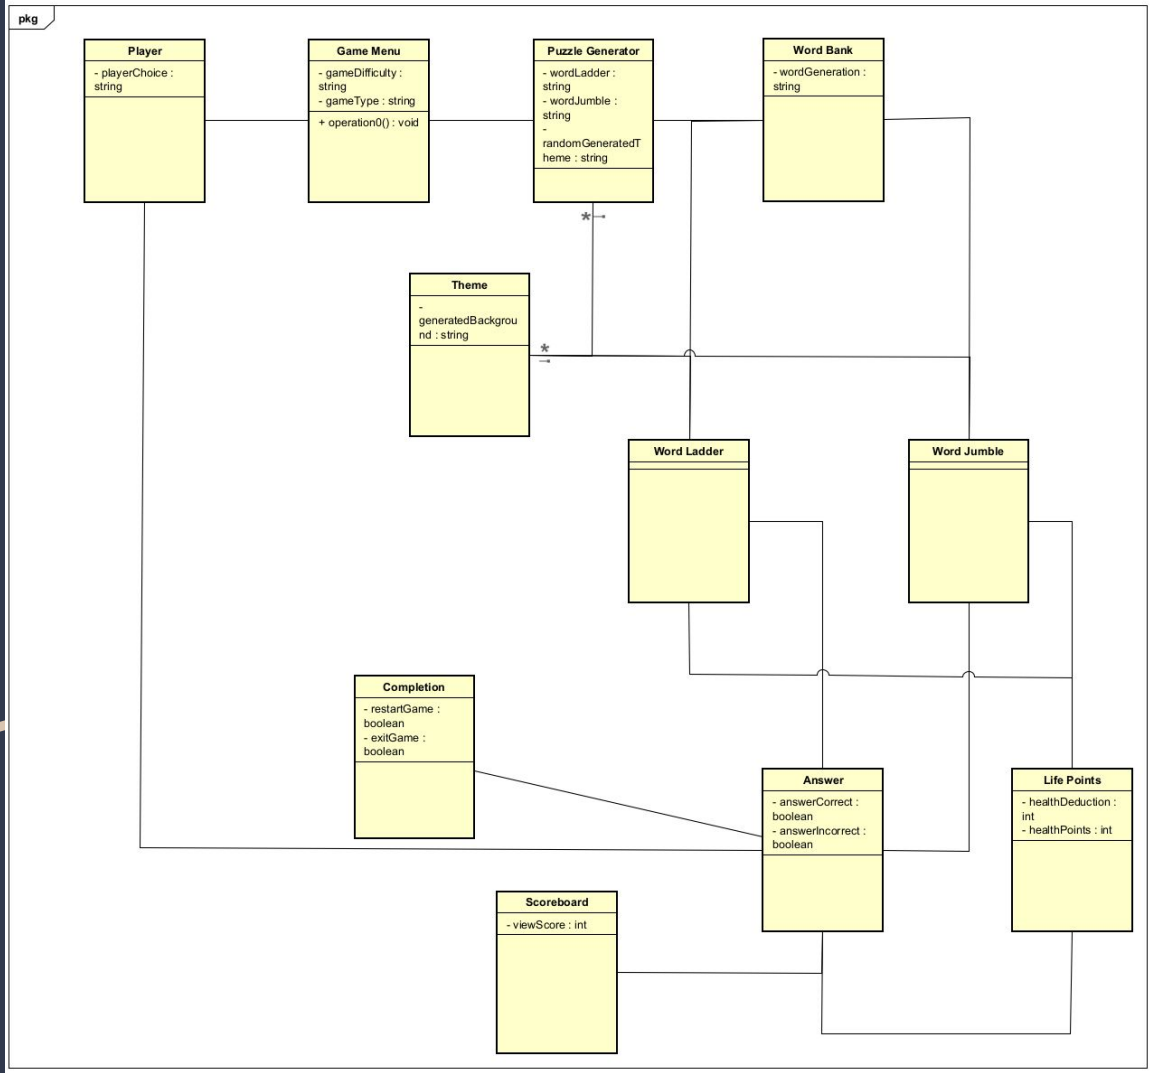

Feature List

- Two word games (Word Ladder and Jumble)
- Customizable difficulty
- Unique themes with music
- Score and time tracking
- Possible lifepoint system to compliment difficulty

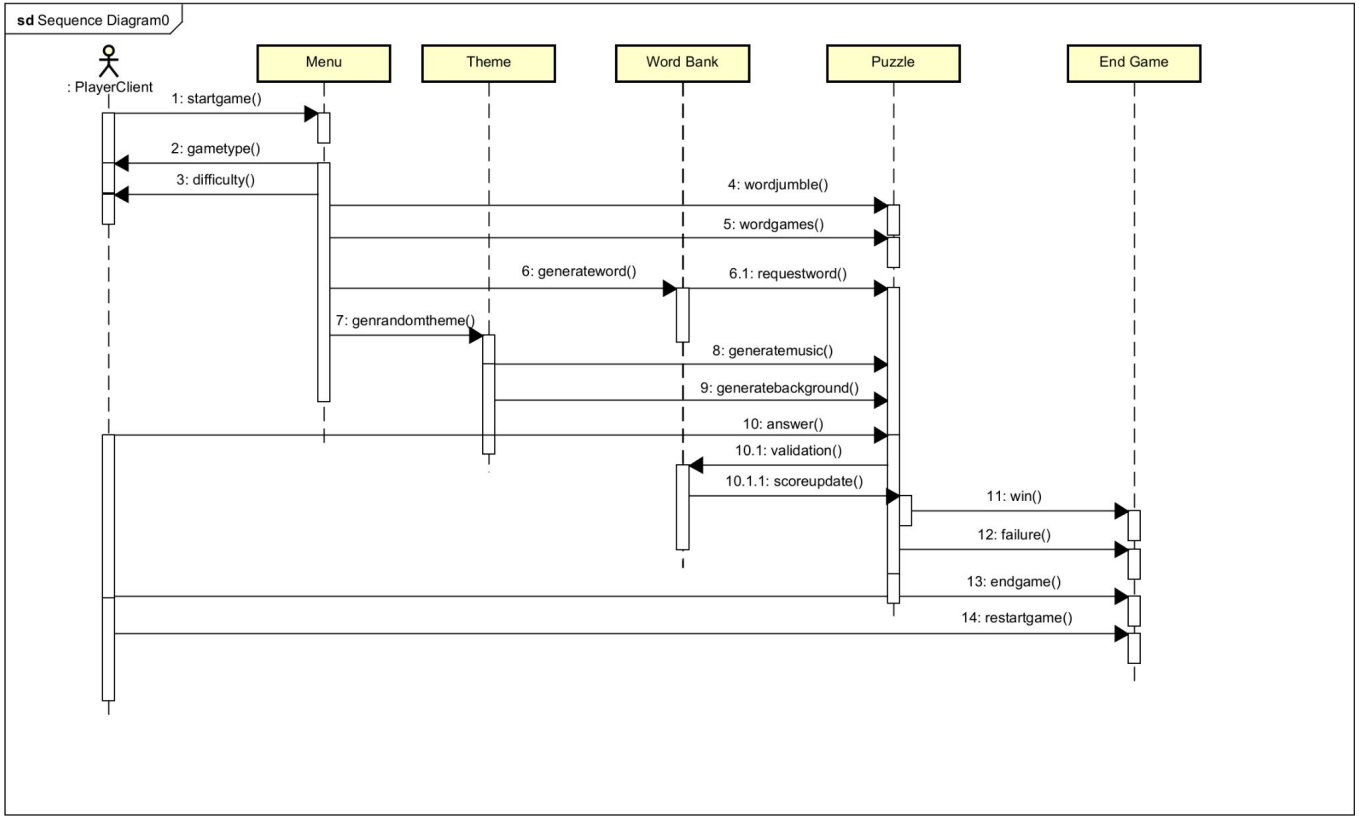

Use Case Model
